

Installing vacuum tubes in the Quad 15

1. Important! Don't connect AC power yet!
2. Check that the Quad 15 has not been damaged.
3. Remove top plate by unscrewing 11 screws on top and 3 screws from the rear. (Philips star screwdriver)
4. Check that all 7 vacuum tubes are placed inside the amplifier and have not been damaged. (Covered in plastic, etc.).
5. Insert vacuum tubes into the tube sockets: (It is not necessary to remove the rear cover)

V1: ECC83S
V2: ECC83S
V3: 5751
V4: ECC81
V5: ECC83S
V6: 6V6GT
V7: 6V6GT

6. Mount Tube retainers as shown on the picture below:

7. Remove all package material and hold the amplifier upside down to check that there's no loose items inside.
8. Mount top plate with 11 screws from the top. 6 x M3 + 5 x M4
9. Mount 2 x M3 screws with washers from the rear to hold topplate.
9. Check that the smaller rear cover is mounted. 4 * M4 screw (allen key)
10. Connect AC power to the amplifier, speaker cabinet, etc. and you're ready to go.
